

ATLANTIC PRINTING & GRAPHICS

OFFICIALLY ZERO WASTE CERTIFIED!

We are extraordinarily proud to announce that Atlantic Printing & Graphics in Tabor City, NC has been **officially certified as a Zero Waste facility**. This status is verified by Green Business Certification Inc. (GBCI) through their TRUE Zero Waste Certification Program.

Atlantic Printing & Graphics achieved this by diverting more than 90% of its waste from the landfill for the most recent 12 months at the time of certification.

We are also proud to be the first packaging company to achieve a Zero Waste Certification through the TRUE Program at GBCI. It's inspiring and incredibly motivating to set this standard and chart the path for ourselves and for the entire packaging supply chain.

Thank you to the entire Tabor City Atlantic team who successfully worked together to achieve our Zero Waste goal! Also, thank you to Sean Clark and Janice Faile for your continuous support from Charlotte. I am excited to work for a company that sees the importance in leading the way and showing how to be successful in packaging, printing and graphics, and still be accountable and successful in sustainability. When we restructure our operations and production systems in a way that improves business, the environment, and our communities, we become true leaders.

— Jud Douglass | Zero Waste Program Coordinator

Atlantic Printing and Graphics was thrilled to pioneer the Zero Waste program for Atlantic! With the help of Jud, Sean, and Caroline we learned a great deal about recyclability and finding partners to help us achieve our Zero Waste goals. We are all in this together, and it truly takes all of us. The team in Tabor City jumped right in and I am so proud of their efforts. Special thanks to Zachary Soles who is our sustainability champion here at the Printing & Graphics division. He did a great job making sure everyone was staying on track with new initiatives and tasks. Way to go Atlantic team!

— Allison Scales | VP, Atlantic Printing & Graphics

While we spend a lot of time thinking about how to ensure our products we distribute are easily recyclable, it's just as important to think about how to make our own operations zero-waste. With this certification, I'm excited that we're setting a high standard of continuous waste diversion for the rest of the packaging industry to follow.

— Caroline James | Sustainability Director
